- Chess and strategic board games.

EMPLOYMENT HISTORY

Senior Software Engineer

iptiQ by Swiss Re (CH), Zürich | 04/2021 – present

As a member of the Commissions & Technical Accounting team at iptiQ, I am responsible for implementing features related to the customers' payment plan, dunning reminders, bookkeeping and commissioning. My daily tasks include making design decisions, implementing coding tasks and cooperating with various stakeholders.

Main contributions:

- Design and implementation of in-house technical accounting platform aimed at significantly reducing external costs.
- Design, implementation and legacy migration of the company's dunning reminders system, ensuring smooth cash flow through the timely collection of payments from customers.
- Improvement of operational processes by developing management APIs and Grafana reports, improving visibility and shortening operational response time.
- Drafting of run-books and design documents for the team's core systems and processes.
- Onboarding and coaching junior members of the iptiQ family.

Tech stack: Kotlin Spring Boot Microservices, PostgreSQL, DynamoDB, Redis, Elasticsearch, Kafka, AWS, Kubernetes.

Senior Software Engineer

TX Group (Tamedia) (CH), Zürich | 09/2019 – 03/2021

My responsibilities included the design and implementation of the core functionalities of the company's in-house CMS.

Main contributions:

- Design and implementation of CMS platform features, test plans and operational tools to ensure the quality and reliability of the software.
- Participation in the CMS legacy migration from Monolith to Microservices, aimed at reducing deployment times and resource usage.

• Collaboration with stake holders to gather requirements and ensure alignment with business goals and objectives.

Tech stack: Java 11 Spring Boot Microservices, MariaDB, Elasticsearch, RabbitMQ.

Senior Software Engineer

Upstream Systems (GR), Athens | 09/2015 – 08/2019

As a member in various teams throughout my career in Upstream, a Digital Marketing and Mobile Monetization player based in Athens, my responsibilities spanned from legacy migrations to designing and implementing new stand-alone applications.

Main contributions:

- Improvement of scalability and availability of the company's customer support module by migrating from PostgreSQL to Cassandra.
- Extraction of legacy Java 6 Monolith functionality into a separate service inside a Java 8 Microservices architecture, including seamless migration of configurations and transactional data.
- From scratch implementation of the company's fraud detection platform with emphasis on scalability and high availability.
- Maintenance and feature development lead of the company's legacy CMS platform.

Tech stack: Java 8 Spring Boot Microservices, PostgreSQL, Redis, Cassandra, RabbitMQ, Java 6, JBoss, JMS.

Full Stack Engineer

Appart S.A (GR), Athens | 05/2013 – 09/2015

As a member of the Campaign Management team, I have participated in different projects and cooperated with various stakeholders from the world of Telecom Service Providers like Vodafone GR, Vodafone AL and Hellas On Line.

Main contributions:

- Design and implementation of high-availability campaign management system, handling real time data of over a million subscribers.
- Mediation system for Hellas OnLine (HOL) Music Club, a music track downloading platform for the subscribers of the 2nd larger Telecom Operator in Greece.

Tech stack: Java 6, PHP, Javascript (jQuery), Jboss, CakePHP (OOPHP, MVC), Apache Wicket, Oracle, MySql, MongoDB, ActiveMQ.

🎓 EDUCATION

Diploma in Electrical & Computer Engineering

Polytechnic School of University of Patras (GR), Patras | 09/2004 – 03/2012

Diploma Thesis: Software development for simulation of loudspeaker-enclosure systems

Supervisor: Prof. Dr. John Mourjopoulos, mourjop@upatras.gr
